Epson America (Long Beach, CA) unleashed its CaptureOne Check Scanner for BOC (back office capture) and RDC (remote deposit capture) applications. The desktop scanner boasts the longest warranty (two years) and the highest MICR accuracy in its class, according to the company. CaptureOne incorporates MICR algorithms and imaging technology from RDM Corporation (Waterloo, Ontario, Canada), a leading provider of electronic payment processing products. It is available in two versions, with scan rate options of 30 or 60 documents per minute (DPM).
